

Free Energy – Supplemental Worksheet

1. Calculate $\Delta S_{\text{universe}}$ after the completion of the following reaction:

Substance	S (J/Kmole)
SO ₂	248
NiO	38
O ₂	205
NiS	53

$$\begin{aligned}\Delta S_{\text{sys}} &= [2(248) + 2(38)] - [2(53) + 3(205)] = -149 \text{ J/K} \\ \Delta S_{\text{surr}} &= -\Delta H/T = -(-890 \text{ kJ})/298 \text{ K} = 3 \text{ kJ/K} = 3000 \text{ J/K} \\ \Delta S_{\text{universe}} &= \Delta S_{\text{sys}} + \Delta S_{\text{surr}} = -149 \text{ J/K} + 3000 \text{ J/K} = 2851 \text{ J/K}\end{aligned}$$

2. Determine the ΔG when:

$$\begin{aligned}\Delta S_{\text{universe}} &= 1303 \text{ J/K} \\ \Delta S_{\text{surr}} &= 1.300 \text{ kJ/K} \\ T &= 25^\circ\text{C}\end{aligned}$$

$$\begin{aligned}\Delta S_{\text{univ}} &= \Delta S_{\text{sys}} + \Delta S_{\text{surr}} \\ \Delta S_{\text{sys}} &= \Delta S_{\text{univ}} - \Delta S_{\text{surr}} = 1303 \text{ J/K} - 1300 \text{ J/K} = 3 \text{ J/K} \\ \Delta S_{\text{surr}} &= -\Delta H/T \\ \Delta H &= -T\Delta S_{\text{surr}} = -(298\text{K})(1.3 \text{ kJ/K}) = -387.4 \text{ kJ} \\ \Delta G &= \Delta H - T\Delta S_{\text{sys}} = -387.4 \text{ kJ} - (298\text{K})(.003 \text{ kJ/K}) = -388.3 \text{ kJ}\end{aligned}$$

3. Determine the minimum temperature for a reaction with $\Delta H = 271 \text{ kJ}$ and $\Delta S = 195 \text{ J/K}$ to be spontaneous.

When $\Delta G = 0$ the reaction is at equilibrium, so solve for T under these conditions.

$$\begin{aligned}\Delta G &= \Delta H - T\Delta S = 0 \\ T &= \Delta H/\Delta S = 271 \text{ kJ} / (0.195 \text{ kJ/K}) = 1389.74 \text{ K}\end{aligned}$$

4. Consider the reaction: $\text{CO}(g) + \text{Cl}_2(g) \rightarrow \text{COCl}_2(g)$ Calculate ΔG_{rxn} at 25°C .

Substance	ΔH_f (kJ/mol)	S (J/ mol K)
CO	-110.5	197.6
Cl ₂	0.0	223.0
COCl ₂	-223.0	289.2

$$\begin{aligned}\Delta H_{\text{rxn}} &= \sum \Delta H_{f,\text{products}} - \sum \Delta H_{f,\text{reactants}} \\ \Delta H_{\text{rxn}} &= [-223 \text{ kJ/mol}] - [-110.5 \text{ kJ/mol}] = -112.5 \text{ kJ/mol} \\ \Delta S_{\text{rxn}} &= \sum \Delta S_{m,\text{products}} - \sum \Delta S_{m,\text{reactants}} \\ \Delta S_{\text{rxn}} &= [289.2 \text{ J/mol K}] - [(223 \text{ J/mol K}) + (197.6 \text{ J/mol K})] = -131.4 \text{ J/mol K} \\ \Delta G &= \Delta H - T\Delta S \\ \Delta G &= -112.5 \text{ kJ/mol} - 298\text{K}(-0.1314 \text{ kJ/mol K}) = -73.34 \text{ kJ/mol}\end{aligned}$$

5. Determine ΔG_f for $\text{SO}_2(\text{g})$. Assume 25 °C for all reactions.

$$\Delta H_{f,\text{SO}_2}(\text{g}) = -297 \text{ kJ/mol} \quad S_{m,\text{SO}_2}(\text{g}) = 248 \text{ J/(K mol)}$$

Then determine ΔG_{rxn} of the following reaction: $\Delta G_f \text{ Cu}_2\text{S}(\text{s}) = -86.2 \text{ kJ/mol}$

$$\Delta G_{f,\text{SO}_2} = \Delta H - T\Delta S = (-297 \text{ kJ/mol}) - (298\text{K})(.248 \text{ kJ/mol}) = -370.9 \text{ kJ/mol}$$

$$\Delta G_{\text{rxn}} = \sum \Delta G_{f,\text{products}} - \sum \Delta G_{f,\text{reactants}}$$

$$\Delta G_{\text{rxn}} = -370.9 \text{ kJ/mol} - (-86.2 \text{ kJ/mol}) = -284.7 \text{ kJ/mol}$$

6. Calculate ΔG° for the reactions below using the provided data. Assume 298 K is standard temperature for your calculations.

	$\Delta H_f^\circ (\text{kJ}\cdot\text{mol}^{-1})$	$\Delta S_m^\circ (\text{J}\cdot\text{mol}^{-1}\cdot\text{K}^{-1})$
$\text{Ag}^+(\text{aq})$	105.6	72.68
$\text{AgCl}(\text{s})$	-127.1	96.2
$\text{C}_{\text{graphite}}(\text{s})$		5.740
$\text{CH}_3\text{OH}(\text{l})$	-238.7	126.8
$\text{Cl}^-(\text{aq})$	-167.2	56.5
$\text{H}_2(\text{g})$		130.6
$\text{O}_2(\text{g})$		205.0

a. $\text{Ag}^+(\text{aq}) + \text{Cl}^-(\text{aq}) \rightarrow \text{AgCl}(\text{s})$

$$\Delta H_{\text{rxn}}^\circ = \sum \Delta H_{f,\text{products}} - \sum \Delta H_{f,\text{reactants}} = (-127.1) - (105.6 - 167.2) = -65.5 \text{ kJ}\cdot\text{mol}^{-1}$$

$$\Delta S_{\text{rxn}}^\circ = \sum \Delta S_{m,\text{products}} - \sum \Delta S_{m,\text{reactants}} = (96.2) - (72.78 + 56.5) = -33.08 \text{ J}\cdot\text{mol}^{-1}\cdot\text{K}^{-1} = -0.03308 \text{ kJ}\cdot\text{mol}^{-1}\cdot\text{K}^{-1}$$

$$\Delta G_{\text{rxn}}^\circ = \Delta H_{\text{rxn}}^\circ - 298 \cdot \Delta S_{\text{rxn}}^\circ = -65.5 \text{ kJ}\cdot\text{mol}^{-1} - 298 \text{ K} \cdot (-0.03308 \text{ kJ}\cdot\text{mol}^{-1}\cdot\text{K}^{-1}) = -55.64 \text{ kJ}\cdot\text{mol}^{-1}$$

b. $\text{C}_{\text{graphite}}(\text{s}) + 1/2 \text{O}_2(\text{g}) + 2 \text{H}_2(\text{g}) \rightarrow \text{CH}_3\text{OH}(\text{l})$

$$\Delta H_{\text{rxn}}^\circ = \sum \Delta H_{f,\text{products}} - \sum \Delta H_{f,\text{reactants}} = (-238.7) - (0) = -238.7 \text{ kJ}\cdot\text{mol}^{-1}$$

$$\Delta S_{\text{rxn}}^\circ = \sum \Delta S_{m,\text{products}} - \sum \Delta S_{m,\text{reactants}} = (126.8) - (5.740 + 1/2 \cdot 205.0 + 2 \cdot 130.6) = -242.64 \text{ J}\cdot\text{mol}^{-1}\cdot\text{K}^{-1} = -0.24264 \text{ kJ}\cdot\text{mol}^{-1}\cdot\text{K}^{-1}$$

$$\Delta G_{\text{rxn}}^\circ = -238.7 \text{ kJ}\cdot\text{mol}^{-1} - 298 \text{ K} \cdot (-0.24264 \text{ kJ}\cdot\text{mol}^{-1}\cdot\text{K}^{-1}) = -166.39 \text{ kJ}\cdot\text{mol}^{-1}$$
